

## New Jira Issue Creation

This document collects a specific procedure to create a new Jira Issue in the system. The general idea is to check the required information for opening the new issue and creating it using this template:

Prerequisites:

- Issue Author
- Issue Main Developer
- Subject
- Description
- Issue Implementation Day

Data:

- Subject: "New Issue with \$subject requested by \$author"
- Opening Date: "\$today"
- Comments: "This issue was opened by \$author and will be developed by \$developer."

The goal of this issue is \$description and it should be integrated on \$implementation\_date"

- Rest of data: Using prerequisites information.
